SUMMARY

Software engineer with 4 years of experience building healthcare applications with C#, ASP.NET Core, React, Angular, SQL Server, AWS, and Azure. Work includes event driven architecture, background processing, and modernizing legacy applications. Improved a provider data pipeline to process 5GB files in 5 to 10 minutes.

CORE SKILLS

Backend and Data	C#, .NET 8 to 10, ASP.NET Core, REST APIs, EF Core, SQL Server, PostgreSQL
Web and Mobile	React, Angular, TypeScript, Flutter, Dart
Cloud and Integration	AWS, Azure App Service, Azure Container Apps, Azure Service Bus, Application Insights, Azure AD, JWT, SignalR, Redis
Delivery and Testing	Git, Docker, Terraform, CI/CD, Azure DevOps, GitHub Actions, xUnit
AI Projects	Python, Azure OpenAI, RAG, OpenSearch, Embeddings, MCP

EXPERIENCE

Software Engineer May 2026 to Present

Optum Global Solutions | Hyderabad, India

- Build features for a healthcare platform using a React portal, ASP.NET Core APIs, background workers, and AWS services.
- Handle features from technical analysis through UI and API changes, worker processing, testing, and release support.
- Move longer tasks to background workers to keep API requests responsive.
- Write xUnit tests for APIs, services, and workers, including edge cases and failures.

Software Engineer Jul 2023 to May 2026

Optum Global Solutions | Hyderabad, India

- Modernized 5 healthcare applications from legacy .NET and ASP.NET to Angular or React with ASP.NET Core APIs, supporting more than 1,000 concurrent internal users.
- Improved a .NET 10 and SQL Server job to process 5GB provider files in 5 to 10 minutes using chunked loads, staging tables, set based SQL, parallel steps, and retries.
- Built ASP.NET Core APIs and React features for a digital health platform serving approximately 5,000 users.
- Secured APIs with Azure AD, JWT, and role based authorization.
- Automated delivery with 3 Azure DevOps pipelines and 2 GitHub Actions workflows.

Software Engineer (Technology Development Program) Jul 2022 to Jul 2023

Optum Global Solutions | Hyderabad, India

- Resolved defects and support tickets across healthcare applications during the Technology Development Program.
- Investigated production incidents through logs, identified root causes, and worked with the team on fixes.
- Updated existing services to improve reliability and make the code easier to maintain.

SELECTED PROJECTS

Low Latency Trading Engine

GitHub repository

C#, .NET 10, PostgreSQL, Zerodha API, React, AWS, Terraform

- Built a .NET 10 retail trading engine that streams Zerodha market data, stores price bars, and runs configurable strategies for Indian cash equities.
- Added protective stops, daily loss limits, stale data checks, and emergency controls before order execution.
- Persisted orders, fills, positions, and P&L in PostgreSQL and reconciled broker state after restarts.
- Added paper trading and backtest workflows, plus an EC2 deployment path using Terraform and GitHub Actions.

PR Review Intelligence System

GitHub repository

Python, Azure OpenAI, OpenSearch Serverless, AWS Lambda, SQS, DynamoDB, S3

- Built a Python pipeline that turns trusted feedback from merged GitHub pull requests into review notes and reusable SKILL.md guidance.
- Checked requested changes against merged code and replaced guidance when later changes made it outdated.
- Retrieved relevant history with Azure OpenAI embeddings and OpenSearch, then fetched limited file context from the exact commit being reviewed.
- Processed signed webhooks with Lambda and SQS, using DynamoDB tracking to prevent duplicate reviews and S3 to store results.

Escape Now

Private source

ASP.NET Core, React, Flutter, SQL Server, SignalR, Redis, Azure, Terraform

- Built React and Flutter clients that share .NET 10 APIs for destination search, bookings, payments, accounts, chat, and notifications.
- Added JWT authentication with refresh token rotation and HttpOnly refresh cookies for the web client.
- Handled payment notifications through SQL outbox workers with leases and retries, and added SignalR updates with Redis.
- Defined Azure Container Apps, Azure SQL, Blob Storage, and related services in Terraform with GitHub Actions deployment workflows.

MORE PROJECTS

- **Document and Website RAG System:** A Python backend that answers questions about PDFs and websites with source citations.
- **ChapterFlow:** An Android reader with web novel translation, offline chapters, and background preloading.
- **Skill Guided Coding Agent:** A Python coding assistant with repository search, tool execution, and recoverable edits.
