

Prashant Panicker

prashp187@gmail.com | +91 70415 41344 | Hyderabad, Telangana

SUMMARY

Full Stack .NET Engineer with nearly 4 years of experience modernizing enterprise healthcare applications from on-prem .NET Framework, ASP.NET, and VB-based workloads into cloud-hosted React and Angular frontends, ASP.NET Core APIs, .NET worker services, and SQL-backed systems. Strongest in Azure delivery with practical AKS, Azure Service Bus, Application Insights, Azure AI Search, and Azure AI Foundry/OpenAI experience; recent AWS exposure includes EKS CI/CD, Aurora PostgreSQL, OpenSearch, and SNS-backed service workflows.

PROFILES

LinkedIn: [linkedin.com/in/prashp187](https://www.linkedin.com/in/prashp187), Github: github.com/Prashant-Panicker, Website: prashant-panicker.github.io

SKILLS

Programming languages: C#, SQL, TypeScript, JavaScript, Python (basics), VB.NET

Databases: SQL Server, PostgreSQL, Aurora PostgreSQL

Frontend: React, Angular, TypeScript, HTML5, CSS3, Sass

Backend: .NET Framework, .NET 8/10, ASP.NET, ASP.NET Core Web API, .NET Worker Services

Cloud and DevOps: Azure Web Apps, Azure Kubernetes Service (AKS), Azure Service Bus, Application Insights, container service deployments, Dockerfile review/debugging, CI/CD, AWS EKS, AWS SNS, OpenSearch

AI and delivery: RAG chatbots, Azure AI Search, Azure AI Foundry/OpenAI text-embedding-3, GPT-4o, semantic caching, rate limiting, metadata filtering, MCP-based tooling, Specify/spec-based agent workflows

Concepts: REST APIs, async processing, parallel processing, threading, event-driven services, secure database access

EXPERIENCE

Optum Global Solutions, UHG | Hyderabad, Telangana

Senior Software Engineer

05/2026 - Present

- Build React web applications, ASP.NET Core APIs, and .NET worker services for healthcare workflows hosted on AWS.
- Work with AWS SNS-based event/log messaging, Aurora PostgreSQL-backed processing flows, OpenSearch-backed search use cases, and CI/CD deployment paths into AWS EKS.
- Apply async processing, service-oriented design, and production-support practices across 5 workflow areas: UI, API, worker services, integrations, and deployments while continuing to build on stronger Azure/AKS experience.

Software Engineer

07/2022 - 04/2026

- Modernized enterprise healthcare applications from on-prem .NET Framework, ASP.NET, and VB-based jobs/websites into Azure-hosted Angular applications, React pages, ASP.NET Core APIs, and .NET 8/10 services.
- Recreated legacy workflows across 4 full-stack layers: frontend, API, worker-service, and database-backed processing flows.
- Built .NET batch and worker processes and supported their deployment into container services, using 3 execution patterns: async processing, threading, and parallel processing.
- Supported Azure-hosted deployments with AKS exposure, Application Insights, and Azure Service Bus messaging while keeping SQL Server-backed data workflows stable through migration and rework.
- Implemented RAG-based chatbot experiences using Azure AI Search, Azure AI Foundry/OpenAI text-embedding-3 embeddings, GPT-4o chat responses, and 3 application controls: semantic caching, rate limiting, and metadata filtering.
- Built an MCP-based database assistant for safe AI-assisted data exploration, with 2 confirmation safeguards covering DDL statements and delete operations, and used Specify/spec-based development with agents for implementation workflows.
- Worked in Agile teams using Rally, code reviews, and CI pipelines to support reliable release delivery.

EDUCATION

Sardar Vallabhbhai National Institute of Technology | Surat, Gujarat

Computer Engineering

05/2022

Bachelor of Technology - 8.54 CGPA

ACCOMPLISHMENTS

- Winner, JPMC Code For Good 2021
- ACM ICPC 2020
- Google HashCode (2020) scored points: 920018

PERSONAL PROJECTS

MCP Database Explorer: Created an MCP server for AI-assisted database exploration and query execution, with 2 explicit confirmation blocks for DDL statements and delete operations.

PDF RAG Navigation Assistant: Built a PDF question-answering workflow using Azure AI Search retrieval, text-embedding-3 embeddings, GPT-4o-based answer generation, and 3 controls: metadata filtering, semantic caching, and rate limiting.

HFT Engine: Built a .NET retail low-latency algorithmic trading engine for Indian cash equities with strategy plugins, mock/Zerodha broker adapters, paper trading, backtesting, risk-gated order execution, PostgreSQL persistence, and an admin API.

Travel Agency Platform: Built a full-stack travel booking system with a React website, Flutter mobile app, .NET API hosted on Azure App Service, and Azure SQL Database backend.

Basic Web Crawler: Built a .NET crawler with robots.txt handling, sitemap discovery, retries, rate limiting, and Playwright support for JavaScript-heavy pages.

SimpleZip: Implemented Huffman coding and LZ77 compression concepts in C# to deepen understanding of algorithms and systems programming.

LANGUAGES

English, Hindi, Malayalam, Gujarati
