SUMMARY

Software engineer with 4 years of experience building healthcare applications with C#, ASP.NET Core, Angular, React, SQL Server, and Azure. Modernized 5 legacy applications, helped deliver systems used by 1,000+ concurrent users, and improved a 5GB data-processing job to finish in 5 to 10 minutes. Personal projects include Flutter apps, Azure OpenAI features, and semantic search.

CORE SKILLS

Backend and Data	C#, .NET 8-10, ASP.NET Core, REST APIs, EF Core, SQL Server
Web and Mobile	Angular, React, TypeScript, Flutter, Dart
Azure and Integration	Azure App Service, Azure Container Apps, Azure Service Bus, Application Insights, Azure AD, SignalR, Redis
Delivery and Quality	Docker, Terraform, Azure DevOps, GitHub Actions, xUnit

EXPERIENCE

Software Engineer II

May 2026 - Present

Optum Global Solutions, UnitedHealth Group | Hyderabad, Telangana

- Build and maintain ASP.NET Core APIs and React features for a digital health platform that was load-tested with 5,000 concurrent users.
- Delivered multi-note pinning, measurement history, and chat updates. Wrote design notes and regression tests and supported production releases.
- Replaced a custom service-registration setup with built-in .NET dependency injection. Added tests for the database and logging code, making the service easier to maintain.

Software Engineer I

Jul 2022 - Apr 2026

Optum Global Solutions, UnitedHealth Group | Hyderabad, Telangana

- Modernized 5 healthcare applications from legacy .NET and ASP.NET into Angular or React front ends with ASP.NET Core APIs. The applications supported more than 1,000 concurrent internal users.
- Built API workflows for eligibility, patient and provider search, redirected authorization, retransmit, appeals, and access management.
- Secured APIs with Azure AD, JWT, and role-based access. Also added health checks and configuration for different deployment environments.
- Improved a .NET 10 and SQL Server job that processes 5GB provider files. Replaced row-by-row work with chunked loads, staging tables, set-based SQL, parallel steps, and retries. The final job completed in 5 to 10 minutes.
- Moved manual jobs toward Azure Service Bus messaging and automated deployments with 3 Azure DevOps pipelines and 2 GitHub Actions workflows for Azure App Service and Azure Container Apps.

SELECTED PROJECTS

Escape Now - Travel Booking Platform

github.com/Prashant-Panicker/Escapeplatform

ASP.NET Core, React, Flutter, SQL Server, SignalR, Redis, Azure, Terraform

- Built a travel booking platform with a React website, Flutter mobile app, ASP.NET Core APIs, and SQL Server. It includes destination search, bookings, itineraries, accounts, and JWT login with refresh tokens.
- Added payment processing, background payment checks, live updates with SignalR, Redis caching, and an Azure OpenAI trip planner.
- Deployed the API and background worker to Azure Container Apps. Set up Azure SQL, Redis, Blob Storage, Key Vault, Static Web Apps, Application Insights, and Azure OpenAI with Terraform and GitHub Actions.

Retail Algorithmic Trading Engine

github.com/Prashant-Panicker/HFT

.NET 10, C#, Zerodha API, WebSockets, PostgreSQL, Terraform, AWS

- Built a .NET 10 paper-trading and backtesting engine for Indian equities. It receives live market data from Zerodha, builds price bars, runs a momentum strategy, and exposes admin APIs.
- Added order risk checks, emergency stop and close-all controls, PostgreSQL storage, restart recovery, and AWS deployment with Terraform and GitHub Actions.

PR Review System - Backend Foundation

github.com/Prashant-Panicker/pr-review-system

.NET 10, PostgreSQL, pgvector, GitHub Apps, webhooks, GitHub Checks

- Built the backend foundation for a GitHub App that receives pull-request webhooks, verifies that requests came from GitHub, downloads code changes, and posts check results.
- Added semantic search over stored code context with PostgreSQL, pgvector, and a fast HNSW index. Kept GitHub, embedding, and LLM services behind interfaces so they can be changed without rewriting the core review logic.

ChapterFlow - Flutter Novel Translator

github.com/Prashant-Panicker/chapter-flow

Flutter, Dart, InAppWebView, Moonshot API, Hive CE, secure storage

- Built a Flutter Android reader for web novels written in other languages. It loads each chapter from the web page and translates the text on the fly with the Moonshot API.
- Added cancel and retry support, a glossary for consistent names and terms, next-chapter preloading, offline storage for three chapters, secure API-key storage, and an automated GitHub Actions APK build.

Skill-Guided Coding Agent

github.com/Prashant-Panicker/skill-based-coding-agent

Python, Azure OpenAI, Git, GitHub CLI, Playwright MCP, embeddings

- Built a command-line coding agent that repeatedly inspects a repository, edits code, runs tests and builds, reviews its changes, and continues until the requested task is complete.
- Added repository maps, cached semantic search, context trimming, skill loading, safe multi-file edits, restore checkpoints, GitHub pull-request tools, and Playwright-based UI validation.

EDUCATION

Sardar Vallabhbhai National Institute of Technology, Surat

May 2022

B.Tech, Computer Engineering | CGPA: 8.54/10

ACHIEVEMENTS

Winner, JPMC Code For Good 2021 | ACM ICPC 2020 Participant

Languages: English, Hindi, Malayalam, Gujarati
