SUMMARY

Software engineer with 4 years of experience building and modernizing applications with C#, ASP.NET Core, SQL Server, Azure and AWS. Work includes APIs, background processing, production fixes, framework upgrades and migrations from legacy .NET systems to Angular or React applications.

SKILLS

Backend and Data Frontend	C#, .NET 8 and 10, ASP.NET Core, REST APIs, EF Core, SQL Server, PostgreSQL, Bulk data processing
Cloud and Delivery	React, Angular, TypeScript
Testing and Workflow	AWS, Azure Functions, Azure Container Instances, Blob Storage, Storage Queues, Service Bus, Application Insights, Azure AD, Redis, SignalR, Docker, Azure DevOps, GitHub Actions, CI/CD xUnit, Specification-driven development (AIDLC, GitHub Spec Kit)

EXPERIENCE

Software Engineer

May 2026 to Present

Optum Global Solutions | Hyderabad, India

- Deliver features, production fixes and .NET 10 upgrades across a React portal, ASP.NET Core APIs, background workers and AWS-hosted services.
- Translate product owner requirements into changes across portal and API workflows, then support release and production follow-up.
- Moved longer-running work from synchronous API requests to background workers to keep requests responsive.

Software Engineer

Jul 2023 to May 2026

Optum Global Solutions | Hyderabad, India

- Built and modernized 5 healthcare applications from legacy .NET systems to Angular or React interfaces with ASP.NET Core APIs, working from requirements through deployment and production support for more than 1,000 concurrent internal users.
- Improved a .NET 10 and SQL Server job to process 5GB provider files in 5 to 10 minutes using chunked loads, staging tables, set based SQL, parallel steps and retries.
- Built ASP.NET Core APIs and React features for a digital health platform serving approximately 5,000 users.
- Built ETL and background processing workflows using Azure Container Instances, Azure Functions, Blob Storage, queues and SQL Server.
- Secured APIs with Azure AD, JWT and role based authorization, and automated delivery with 3 Azure DevOps pipelines and 2 GitHub Actions workflows.

Software Engineer (Technology Development Program)

Jul 2022 to Jul 2023

Optum Global Solutions | Hyderabad, India

- Resolved defects and support tickets across healthcare applications while learning the systems alongside senior engineers.
- Investigated production issues using logs, SQL data and application behaviour, and delivered small feature and maintenance changes with senior guidance.

PERSONAL PROJECTS

Low Latency Trading Engine

GitHub repository

C#, .NET 10, ASP.NET Core, PostgreSQL, EF Core, xUnit, React, AWS

- Built a .NET 10 trading engine with separate modules for market data, strategies, risk checks and order management, plus an admin API.
- Persisted orders, fills and positions in PostgreSQL with EF Core migrations, and reconciled broker state after restarts.
- Added order rate limits, protective stops and stale data checks, with xUnit tests for concurrent submissions and failure handling.
- Added admin APIs for runtime status and operator audit history, alongside paper trading and backtesting.

Escape Now

Private source

ASP.NET Core, React, Flutter, SQL Server, SignalR, Redis, Azure, Terraform

- Built shared ASP.NET Core APIs for bookings, payments, accounts and notifications, used by React and Flutter clients.
- Added JWT authentication with refresh token rotation and HttpOnly refresh cookies for the web client.
- Processed payment notifications through SQL outbox workers with leases, retries and failure logging; used SignalR with Redis for live updates.
- Defined Azure Container Apps, Azure SQL and Blob Storage in Terraform, with GitHub Actions deployment workflows.

PR Review Intelligence System

GitHub repository

Python, Azure OpenAI, OpenSearch Serverless, AWS Lambda, SQS, DynamoDB, S3

- Built a Python pipeline that turns trusted feedback from merged GitHub pull requests into review notes and reusable SKILL.md guidance.
- Separated webhook handling from review and history processing with Lambda and SQS, including retries and dead letter queues.
- Prevented duplicate reviews during retries by tracking webhook deliveries in DynamoDB and marking posted reviews.
- Retrieved accepted review feedback with Azure OpenAI embeddings and OpenSearch, then fetched file context from the exact commit under review.

EventBroker

Private source

.NET 10, C#, TCP sockets, append-only logs, Docker

- Built a TCP-based broker with producer and consumer clients, a length-prefixed protocol, topic subscriptions and offset-based replay.
- Persisted events in append-only segmented logs with flush-to-disk writes, restart recovery, segment rotation and configurable retention.
- Added API-key authentication, topic-level permissions, token-bucket rate limiting, batch publishing and compression.
- Included runtime metrics, a reusable .NET client library, example producer and consumer applications, and Docker packaging.

DbForge

Private source

.NET 9, ASP.NET Core, React, TypeScript, SQL Server, Material UI

- Built a guided workflow for connecting to source and target databases, selecting data, mapping columns, previewing SQL and executing copy operations.
- Discovered SQL Server databases, tables, columns, primary keys, identity fields and nullability for source selection and target validation.
- Added custom queries, SQL previews, insert and upsert modes, optional transactions and row-level error reporting.
- Stored connection details in server-side sessions and implemented a five-step React and Material UI workflow.

EDUCATION

Sardar Vallabhbhai National Institute of Technology, Surat, India

B.Tech, Computer Engineering | CGPA: 8.54/10 | May 2022

ACHIEVEMENTS

ACM ICPC 2020 Participant
