

Prashant Panicker

prashp187@gmail.com | Hyderabad, Telangana

SUMMARY

Senior Software Engineer with nearly 4 years of experience building APIs, React and Angular UI features, .NET services, SQL-backed workflows, and batch jobs for enterprise healthcare applications. Experienced in secure database workflows, multi-agent automation, and RAG-based document question answering, with current cloud upskilling in AWS fundamentals.

PROFILES

LinkedIn: [linkedin.com/in/prashp187](https://www.linkedin.com/in/prashp187), Github: github.com/Prashant-Panicker, Website: prashant-panicker.github.io

SKILLS

Programming languages: C#, SQL, JavaScript, TypeScript, Python (basics)

Databases: SQL Server, PostgreSQL

Frameworks: .NET Core, ASP.NET Core Web API, ASP.NET MVC, React, Angular, Flutter (basics)

Cloud: Azure Web Apps, Azure Container Service, Application Insights, AWS fundamentals

AI and automation: text embeddings, RAG, MCP-based tooling, multi-agent workflows

Dev tools: Git, GitHub, Rally (Agile), CI/CD basics

Concepts: REST APIs, Distributed Systems, secure database access

EXPERIENCE

Optum Global Solutions, UHG | Hyderabad, Telangana

Senior Software Engineer

05/2026 - Present

- Develop API endpoints and React-based UI features for operational healthcare application workflows.
- Build and maintain backend services, UI integrations, and database-facing flows with attention to reliability, maintainability, and review-ready delivery.
- Apply AWS fundamentals and cloud concepts while continuing production delivery across established enterprise application stacks.

Software Engineer

07/2022 - 04/2026

- Developed and deployed Angular, ASP.NET Core Web API, and ASP.NET MVC applications for operational data management workflows.
- Built and containerized .NET batch jobs, automating data processing workflows and improving repeatability across environments.
- Managed deployments on Azure Web Apps and Azure Container Service, with Application Insights for monitoring.
- Enhanced SQL queries and stored procedures to improve data processing efficiency and responsiveness.
- Built AI-team, a structured multi-agent engineering workspace that coordinates architecture, development, QA, review gates, branch handoffs, and status tracking.
- Created a basic MCP server enabling AI-assisted database querying, with confirmation safeguards for DDL statements and delete operations before execution.
- Created a basic RAG system to process PDF documents and answer questions using text embeddings with OpenAI GPT-4o for answer generation.
- Collaborated in Agile teams using Rally for sprint planning and retrospectives, and participated in code reviews and CI pipelines to maintain quality.

EDUCATION

Sardar Vallabhbhai National Institute of Technology | Surat, Gujarat

Computer Engineering

05/2022

Bachelor of Technology - 8.54 CGPA

ACCOMPLISHMENTS

- Winner, JPMC Code For Good 2021
- ACM ICPC 2020
- Google HashCode (2020) scored points: 920018

PERSONAL PROJECTS

AI-Team Engineering Workspace: Built a multi-agent development workflow for architecture, developer assignment, QA validation, status tracking, and controlled handoffs across implementation stages.

MCP Database Assistant: Created a basic MCP server that allows AI workflows to connect to databases and run queries, with explicit user-confirmation blocks for DDL statements and delete queries.

PDF RAG Question Answering System: Created a RAG system to process PDF documents and answer user questions using text embeddings with OpenAI GPT-4o for answer generation.

Stock Market Data Analyzer: Designed an application using .NET to collect stock market data and implemented algorithms for trend analysis.

Travel Planner Mobile App: Developed a cross-platform Flutter app to organize travel itineraries, with offline support and cloud synchronization (Deployed on FireBase).

LANGUAGES

English, Hindi, Malayalam, Gujarati
